Computer Science graduate (Fasilkom UI) working as a Data Analyst & Visualization Intern at Telkom Indonesia, turning undocumented operational data into BI dashboards and daily reporting used by project managers, division management, and senior stakeholders. Strongest at the unglamorous core of business intelligence: recovering metric definitions nobody wrote down, reconciling conflicting numbers back to a single source of truth, and proving a figure is correct before it reaches management. SQL, Python, PostgreSQL, applied statistics and machine learning, and reporting automation.

Education

University of Indonesia | Depok, Indonesia

- Bachelor of Computer Science, Faculty of Computer Science
- cGPA : 3.34
- Relevant Courses : *Data Mining, E-Commerce, Business Process Management, AI and Data Science, Statistics and Probability, Database*

Work Experience

PT Telkom Indonesia | Data Analyst & Visualization Intern, SDA Division

Aug 2026 – Present

- Delivered five end-to-end reporting/BI products in six weeks, each from raw operational data with no documentation or brief.
- Turned an open-ended request to “track PM performance” into a 27-metric framework using SQL (SQLite views, window functions) on 178 projects, finding that on-time delivery falls from 48% at technical completion to 22% at formal closure. Several recommendations were adopted by the team, including phase-one metrics and dashboard features derived from the analysis.
- Rebuilt the division’s daily provisioning report (tens of thousands of open orders/day) by reverse-engineering an undocumented 11-step Excel Power Query pipeline and recovering the team’s real pivot-table definitions directly from spreadsheet file internals, replacing 1–2 hours/day of manual export-transform-paste work with an automated pipeline.
- Root-caused a ~19% discrepancy between the automated report and the team’s official numbers that had been open for days, tracing it to a status value missing from the working metric definition; validated the rebuilt pipeline cell-by-cell against the team’s own pivots (42/42 and 35/35 cells matched, 99,760 rows checked with zero differences) before it replaced the manual process.
- Audited the source data behind a live rollout-tracking dashboard (~5,800 sites, published to senior management at Telkom and a retail partner) and found two status values silently mis-bucketed into “On Hold.” Correcting the definition moved the programme’s headline progress metric from ~15% to ~38%, the number now reported upward to management.
- Reconciled a stakeholder’s dashboard mockup against a 42-column production data source field-by-field and surfaced a data-granularity defect (single rows bundling multiple contracts) that would have overstated client-facing revenue reporting by roughly 10x.

Tentang Kopi | Data Scientist Freelance

Aug – Dec 2024

- Conducted product bundling analysis using association rule mining techniques (support, confidence, and lift) to identify high-performing combinations.
- Successfully developed several product bundles that helped Tentang Kopi minimize ingredient waste caused by expiration.

Student Executive Board (BEM) Election Campaign Team | Data Analyst

Dec 2024 – Apr 2025

- Analyzed and visualized survey data to support strategic decision-making for the election campaign.
- Created dashboards and visual reports that guided campaign directions and resource allocation.
- Collaborated closely with campaign leaders to translate data insights into actionable plans.

Projects

E-Commerce Sales & Delivery Performance Analysis | *Data Analyst*

July 2026

Personal Project | SQL (SQLite), Python

- Conducted data quality audit and exploratory analysis on Brazilian e-commerce transaction data (Olist dataset), including root-cause investigation of order-item record mismatches.
- Analyzed revenue trends and month-over-month growth using SQL (CTEs, window functions), and investigated the relationship between delivery performance and customer satisfaction, uncovering that a notable share of low-rated orders were, counterintuitively, delivered on time.

GenAI Prompt Pattern Classification (Undergraduate Thesis) | *Research Analyst*

Feb – June 2026

Fasilkom UI | Python, Pandas, Scikit-Learn, Krippendorff’s Alpha, Inductive Coding

- Derived a 5-class usage taxonomy through qualitative coding of GenAI prompts, validated for inter-rater reliability (Krippendorff’s Alpha ≈ 0.85), and built a supervised multi-class text classifier on it to analyze student behavior in AI-assisted problem solving.

Global Terrorism Data Analysis and Machine Learning Model | *Data Scientist*

Aug – Dec 2024

KASDD Course Final Project | Python, Pandas, Scikit-Learn, Matplotlib, Seaborn

- Built multi-class classification and regression models on 33,140 records to predict attack targets and estimate damage costs, and segmented attack patterns using K-Means and Hierarchical Clustering, evaluated via Silhouette Score and Dendrograms.

Leadership Experience

Open House & BEM Fasilkom UI | *VPIC & Staff of Public Relations*

Aug – Dec 2023

- Co-led PR division operations, directing the “Fasilkom Rewind” video campaign, managing cross-divisional MC talent distribution, and running school outreach and cross-faculty networking programs to maintain consistent organizational branding.

Skills

Data Analytics: SQL (SQLite, PostgreSQL), Python (Pandas, SciPy, Scikit-Learn), Excel & Power Query, Data Cleaning & Validation, ETL / Data Pipelines, Statistics & Hypothesis Testing, Machine Learning, Google Sheets API, Git

Soft Skills: Analytical Thinking, Communication, Data Storytelling, Attention to Detail, Problem Solving, Stakeholder Management, Teamwork, Adaptability

Certifications: Financial Analysis, Term Loan Appraisal & Working Capital (Udemy, 2023); Google Digital Marketing & E-commerce (Coursera, 2025); 100 Days of Code: The Complete Python Pro Bootcamp (Udemy, 2022)

Languages: Bahasa Indonesia (Native), English
